DEVENDRA SHETTY

Embedded Systems Engineer

EXPERIENCE

Embedded Software Engineer, Corvid Instruments
Apr 2020 - Present
Develop firmware for industrial sensor modules on ARM Cortex-M4. Implemented the CAN bus communication stack and a bootloader supporting over-the-air updates. Reduced power consumption 31% by reworking the sleep-state machine. Write in C with selected C++ for the driver abstraction layer. Debug with JTAG and a logic analyser.

Firmware Intern, Corvid Instruments
Sep 2019 - Mar 2020
Wrote device drivers for SPI and I2C peripherals. Built a test harness for the sensor calibration routine.

PROJECTS

RTOS scheduler implemented from scratch for a university project: round-robin and priority-based scheduling with a fixed-size task control block pool.

SKILLS

C, C++, ARM assembly, FreeRTOS, CAN, SPI, I2C, UART, Git, Keil, JTAG debugging, oscilloscopes, KiCad.

EDUCATION

B.Tech Electronics and Computer Engineering, Halloway Institute, 2019
Coursework: Microprocessors, Embedded Systems, Operating Systems, Digital Design.
